APRIL 2016 - MARCH 2017

I did my **10th Standard** from this school and was able to score a total aggregate CGPA of **8.8**.

PROJECTS

- **MESSAGE BOARD** — *Done by a team of 3 including me.*

We as a team of 3 did this project together. The message board is a project like Instagram where we can upload pictures and people we know will be able to Like and Comment. There we are also able to see the online status of the people we know.

In this project, I was responsible for designing the news feed page and a basic database schema.

The place where I faced challenges were during padding and forming the dropdown menu.

- **CODERS**

This project is underdevelopment and is being accomplished by a team of 2(including me). Here we are building a website that has got all the information that is needed by a beginner to learn programming and helps him/her to become a future logic developer.

- **IMAGECHATS**

This project is developed by me. Here I am building a website that is similar to instagram. This project is used to understand the basic functioning of the instagram. Although instagram is using cloud, I have used a database to store all the images and chats.
